Agritrend Winter Products 2024/2025

Agritrend SPV Features. (Hydraulic folding V-Ploughs)

The Agritrend SPV Plough was designed as a versatile and budget priced tool with many advantages over straight ploughs.

- “cup and shunt” of snow using Y-position
- Folding ability to get in and around tight spaces
- Strong build (680kg) for reliable and long working life
- Shock absorbers prevent damage to cleaning blades
- Suitable for inexperienced users
- Electric control from the cab.
- All ploughs have full options.
- Aggressive direct low prices for rapid ROI

Features of SPV Hydraulic Folding Snow Ploughs

- Angling to left and right 30°
- Adapts to the road camber left/right tilt 12°
- LED out-rigger lights as standard
- Winding jacks X 2 per plough as standard
- Water-proofing of electrics
- Protective shock absorbers for hidden objects
- Hardox blade option
- Tough specification with weight 650kg
- Multi-point greasing
- Full electric control from cab

■ Pronar three point linkage mounted gritters

The Pronar gritter has been selected by Agritrend as best of class for quality and value for a long-life gritter with many years of economic life. Sizes 250 litres and 500 litres. Plastic hopper and stainless-steel spreading fins. Choice of PTO or hydraulic drive. Optional hydraulic shut-off from the cab. Directional spreading. Cat I & II linkage. Aggressive agitator to prevent bridging.

■ Pronar self-loading gritter

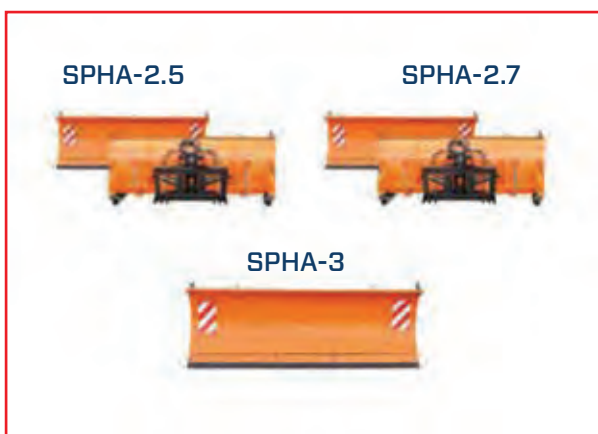

This is a 1 cubic meter capacity self-loading gritter. Solid build weighing 500kg when empty and able to carry 1700kg of sand and grit. Comes with full electric control as standard. Spreads from 2.5 to 6 meters. Spreads 5-40 grams per meter for grit and 50 to 150 grams per meter with sand. Requires one double acting hydraulic service.

■ Pronar box gritter

Designed for placement on lorry bodies for surface spreading of grit and sand for de-icing road surfaces. Spreader fed by conveyor belt. EPT-15 is a 1.5 cubic meter capacity version with electrically driven belt and spreader. The EPT-21 is a 2.1 cubic meter version with hydraulically powered belt and spreader. Both models have full electric control from the cab with max working speed 40 km/h. Spreads 5-40 grams per meter for grit and 50 to 150 grams per meter with sand. Comes with fork slots and high stand for inspection and conjugation with carrier vehicle.

■ Agritrend Straight Ploughs: SPHA-2.5, SPHA-2.7 and SPHA-3

These are built to the same standards as our SPV plough with generous quantities of steel. All models have hydraulic angling to 30° with 12° left/right tilt to accommodate road camber. Cat II linkage designed to fit all sizes of tractor. Heavy duty 50 mm rubber cleaning blades mounted onto three independent sections with separate shock absorbers. Hardox blade option. LED outrigger lights with cables, running wheels, linkage pins and hydraulic hoses come as standard.

Model	Width (m)	Angled Width (m)	Weight (kg)	Shield Height	Scraper	Grease points	Independent Blade sections
SPHA-2.5	2.5	2.25	550	1 meter	50mm	All moving parts	3
SPHA-2.7	2.7	2.30	485	1 meter	50mm	All moving parts	3
SPHA-3	3	2.65	410	1 meter	50mm	All moving parts	3

■ Agritrend Shunter. Linkage Mounted Plough. For front or back linkage.

Comes in 2.5 meter and 2.7 meter versions. At 300 kg weight with 5 cm cleaning blades these are very robust and a value for money solution to enable small and compact tractors to manage significant snow volumes.

Agritrend SPVC (Compact V-Pough) for municipal tractor front linkage or tractor loaders

These hydraulically folding V ploughs come with full electric control from cab and have both Euro 8 brackets and 3 point linkage on the headstock as standard.

Sizes 1.3m, 1.5m, 1.8m and 2 meters. This is a highly competent snow plough ideal for car parks and other public spaces. Full control from cab allows the plough to fold to get into tight spaces where snow can be cupped, shunted and shifted.

The Agritrend SP range of snow ploughs are strong and sensibly priced for long life and rapid return on investment.

Agritrend Snow ploughs are made by our production partner to our design and high standards. We use generous quantities of steel and avoid cheaper components. We exert control over quality and standardisation in the factory and we take the observations and expertise of our customers into the design room. This has enabled us to leap-frog the established brands from Scandinavia and Germany with a competent product at game-changing low prices.
